PENJELASAN TEKNIS**TECHNICAL NOTES**

- 1. Sumber utama data kependudukan** adalah sensus penduduk yang dilaksanakan setiap sepuluh tahun sekali. Sensus penduduk telah dilaksanakan sebanyak tujuh kali sejak Indonesia merdeka, yaitu tahun 1961, 1971, 1980, 1990, 2000, 2010, dan 2020. Di dalam sensus penduduk, pencacahan dilakukan terhadap seluruh penduduk yang berdomisili di wilayah teritorial Indonesia termasuk warga negara asing kecuali anggota korps diplomatik negara sahabat beserta keluarganya. Metode pengumpulan data dalam sensus dilakukan dengan wawancara antara petugas sensus dengan responden. Pencatatan penduduk menggunakan konsep usual residence, yaitu konsep di mana penduduk biasa bertempat tinggal. Bagi penduduk yang bertempat tinggal tetap dicacah di mana mereka biasa tinggal, sedangkan untuk penduduk yang tidak bertempat tinggal tetap dicacah di tempat di mana mereka ditemukan petugas sensus pada malam ‘Hari Sensus’. Termasuk penduduk yang tidak bertempat tinggal tetap adalah tuna wisma, awak kapal berbendera Indonesia, penghuni perahu/rumah apung, masyarakat terpencil/terasing, dan pengungsi. Bagi

1. The main source of demographic data is population census, which is conducted every ten years. Population Census has been conducted seven times since Indonesia's independence namely 1961, 1971, 1980, 1990, 2000, 2010, and 2020. The population census enumerates all residents who domicile in the entire territory of Indonesia including foreign citizens except the diplomatic corps members and their families. The method of data collection in a population census involves interviewing respondents. Enumeration of the population uses the concept of “usual residence”, which is the concept of “places where people usually live”. *De jure* was applied to the permanent residents, while *de facto* was applied to non-permanent residents. The permanent residents were enumerated in place where they normally live, the non-permanent residents were enumerated where they were found by the enumerators, on the night of ‘Census Date’. The non permanent residents include homeless people, crewman of Indonesian vessel, boat people, remote area community, and internally displaced persons. Those who had permanent residence and had been travelling away

mereka yang mempunyai tempat tinggal tetap dan sedang berpergian ke luar wilayah lebih dari enam bulan, tidak dicacah di tempat tinggalnya, tetapi dicacah di tempat tujuannya. Untuk tahun yang tidak dilaksanakan sensus penduduk, data kependudukan diperoleh dari hasil proyeksi penduduk. Proyeksi penduduk merupakan suatu perhitungan ilmiah yang didasarkan pada asumsi dari komponen-komponen perubahan penduduk, yaitu kelahiran, kematian, dan migrasi. Proyeksi penduduk Indonesia 2010–2035 menggunakan data dasar penduduk hasil SP2010.

PENJELASAN TEKNIS

1. **Inflasi** adalah kecenderungan naiknya harga barang dan jasa pada umumnya yang berlangsung secara terus menerus. Jika inflasi meningkat, maka harga barang dan jasa di dalam negeri mengalami kenaikan. Naiknya harga barang dan jasa tersebut menyebabkan turunnya nilai mata uang. Dengan demikian, inflasi dapat juga diartikan sebagai penurunan nilai mata uang terhadap nilai barang dan jasa secara umum.
2. **Indeks Harga Konsumen (IHK)** adalah Indeks yang menghitung rata-rata perubahan harga dari suatu paket barang dan jasa yang dikonsumsi oleh rumah tangga dalam kurun waktu tertentu.

TECHNICAL NOTES

1. *Inflation* is a sustained increase in the general price level of goods and services in an economy over a period of time. When the inflation rate rises, the price of goods and services in the country increases. The rising prices of goods and services led to a decline in currency values. Thus, inflation may also be interpreted as a decline in the value of the currency against the value of goods and services in general.
2. *Consumer Price Index (CPI)* is an index which calculates average price changes of a commodity package consisting of goods and services that people consumes in a certain period of time.

TECHNICAL NOTES

- 1. Gross Domestic Product at the national level and Gross Regional Domestic Product (GRDP) at the regional level (provinces/regencies/municipalities) are the basic measure of the value added arising from economic activity.** To compile these statistics, two approaches have been used, i.e. "production approach" and "expenditure approach". The first approach is to measure value added produced by various kinds of economic activities, while the second approach is to measure final uses of the country's output. In other words, GDP/GRDP is the sum of total value added produced by all economic industries (activities) and the way of using it.
- 2. GRDP by industry classification changes from 9 sectors to 17 industries.** GRDP by industry is classified by types of economic activities such as Agriculture, Forestry and Fishing; Mining and Quarrying; Manufacturing; Electricity and Gas; Water Supply, Sewerage, Waste Management and Remediation Activities; Construction; Wholesale and Retail Trade, Repair of Motor Vehicles and Motorcycles; Transportation and Storage; Accommodation and Food Service Activities; Information and Communication; Financial and Insurance Activities; Real Estate Activities; Business Activities;

- Makan Minum; Informasi dan Komunikasi; Jasa Keuangan dan Asuransi; Real Estat; Jasa Perusahaan; Administrasi Pemerintahan, Pertahanan dan Jaminan Sosial Wajib; Jasa Pendidikan; Jasa Kesehatan dan Kegiatan Sosial; dan Jasa lainnya.
3. Produk Domestik Regional Bruto maupun agregat turunannya disajikan dalam 2 (dua) versi penilaian, yaitu atas dasar "harga berlaku" dan atas dasar "harga konstan". Disebut sebagai harga berlaku karena seluruh agregat dinilai dengan menggunakan harga pada tahun berjalan, sedangkan harga konstan penilaiannya didasarkan kepada harga satu tahun dasar tertentu, dalam publikasi ini digunakan harga tahun 2010.
 4. **Indeks implisit** adalah suatu indeks yang menunjukkan tingkat perkembangan harga di tingkat produsen (producer price index). Indeks implisit digunakan untuk mengetahui adanya perubahan harga produsen dari barang dan jasa secara keseluruhan yang lebih dikenal dengan tingkat inflasi di sisi produsen.
- Public Administration, Defence and Compulsory Social Security; Education; Human Health and Social Work Activities; and Other Service Activities.*
3. *GRDP and its aggregations are presented in two forms: at current market prices and at constant base year market prices. In presenting current market prices, all aggregates are valued at current market prices, while base year constant market prices are shown by valuing all aggregates at fixed base year prices. Year of 2010 is used as the base year in this publication.*
 4. *Implicit index is an index that shows producer price development. It is used to comprehend that there is change of producer price in most of goods and service and it is also well known as inflation rate in producer's side.*

PENJELASAN TEKNIS**TECHNICAL NOTES**

- 1. Jumlah penduduk dan Angka Harapan Hidup** penduduk setiap negara merupakan hasil estimasi yang merujuk pada data sensus yang dilakukan setiap negara. Misalnya Indonesia mengacu pada hasil Sensus Penduduk (SP) 2010. Estimasi tersebut memperhatikan perubahan tingkat kelahiran, kematian, dan perpindahan penduduk.
- 2. Laju pertumbuhan Produk Domestik Bruto (PDB)** diperoleh dari perhitungan PDB atas dasar harga konstan. Diperoleh dengan cara mengurangi nilai PDB pada tahun ke-n terhadap nilai pada tahun ke n-1 (tahun sebelumnya), dibagi dengan nilai pada tahun ke n-1, dikalikan dengan 100 persen. Laju pertumbuhan menunjukkan perkembangan agregat pendapatan dari satu waktu tertentu terhadap waktu sebelumnya.
- 3. Penduduk Miskin** adalah penduduk yang memiliki rata-rata pengeluaran perkapita perbulan dibawah garis kemiskinan. Untuk mengukur kemiskinan, BPS menggunakan konsep kemampuan memenuhi kebutuhan dasar (basic needs approach). Dengan pendekatan ini, kemiskinan dipandang sebagai ketidakmampuan dari sisi ekonomi untuk memenuhi kebutuhan dasar makanan dan
- 1. Population data and life expectancy at birth data** of each country refer to the population census-based estimation result conducted by each country. For example, Indonesia population data refer to the result of the 2010 Population Census. The estimates took into account the trends in fertility, mortality, and migration.
- 2. Growth rate of Gross Domestic Product is derived from GDP at constant market prices. It is obtained by subtracting the value of GDP year n with the value of GDP year $n-1$, divided by the value of GDP year $n-1$ then multiplied by 100 percent. The growth rate of GDP explains the income growth during the given period.**
- 3. Poor population** is the population that has an average monthly per capita expenditure below the poverty line. To measure poverty, BPS uses the concept of ability to meet basic needs (basic needs approach). With this approach, poverty is seen as an inability on the economic side to meet basic food and non-food needs as measured by expenditure.

bukan makanan yang diukur dari sisi pengeluaran.

4. **Indeks Pembangunan Manusia (IPM)** diperkenalkan oleh United Nations Development Programme (UNDP) pada tahun 1990 dan dipublikasikan secara berkala dalam laporan tahunan Human Development Report (HDR). IPM menjelaskan bagaimana penduduk dapat mengakses hasil pembangunan dalam memperoleh pendapatan, kesehatan, pendidikan, dan sebagainya. IPM dibentuk oleh 3 (tiga) dimensi dasar yaitu, umur panjang dan hidup sehat, pengetahuan serta standar hidup layak. IPM merupakan indikator penting untuk mengukur keberhasilan dalam upaya membangun kualitas hidup manusia (masyarakat/penduduk). IPM dapat menentukan peringkat atau level pembangunan suatu wilayah/negara. Bagi Indonesia, IPM merupakan data strategis karena selain sebagai ukuran kinerja Pemerintah, IPM juga digunakan sebagai salah satu alokator penentuan Dana Alokasi Umum (DAU).
4. **The Human Development Index (HDI)** was introduced by the United Nations Development Program (UNDP) in 1990 and is published regularly in the annual Human Development Report (HDR) report. IPM explains how residents can access the results of development in obtaining income, health, education, and so on. HDI is formed by 3 (three) basic dimensions namely, long life and healthy living, knowledge and decent living standards. HDI is an important indicator to measure success in efforts to build the quality of human life (community / population). HDI can determine the ranking or level of development of a region / country. For Indonesia, HDI is a strategic data because in addition to being a measure of Government performance, HDI is also used as one of the allocators for determining the General Allocation Fund (GAF).
